Our Teachers' Influence.

It is amusing what things we remem ber from our own teachers; from one, an anecdote; from another, a scrap of information; from another, a point of view; from another, a conviction; and sad to relate, from many, nothing. They talked to us, let their personalities play upon us, advised us, scolded, bored, cajoled. Undoubtedly, the sum of their influence went to make us different from what we should have been without it; yet often the last thing we er about them is the facts they mught us. The one who made us work hardest may be the least remembered, and the one through whose classes we February Atlantic.

MORE SPRING WHEAT ASKED OF FARMERS

Large Supply of Food and Feedstuffs Needed in 1918.

Agricultural Department Asks Incress ed Perk Production and Larger Acreage of Grain Crops.

Washington, D. C .- The planting of an increased acreage to spring when and the production of an increased sup ply of other food products and of live stock, especially hoge, is recommened in a supplementary food production program issued by the United States department of agriculture.

This program re-emphasizes and amplifies the food-production program

for 1918 issued by the department in August, 1917, and other suggestions made in the fall and the first of this year regarding increased pork producstuffs in the South. Taken in connec tion with the recommendations previ ously made, it suggests in full the pro posals which the department thinks it desirable to offer with a view to secure enough meat and dairy prod ucts, cereals, sugar and other staple and perishable foods, wool and cotton for the nation, its armies, and the allies. It gives suggestions for the approaching spring operations, based upon the latest available information as to the condition of the fall-planted crops of winter wheat and rye and as to the number of ment and dairy ant mals reported for 1917. They repre sent the best thought of the specialists of the department who have had the benefit of advice from agricultural leaders throughout the country.

Our Best Efforts Required. "Notwithstanding an increased production of staple crops in the United States in 1917, there is need for more food," the program states. "Taking into account our own needs, the needs of the nations associated with us in this war, and the needs of friendly neutral nations, our best efforts will be required to provide enough food in Whether the war continues of not, the demands on this country, because of the increasing population and the needs of Europe will be great. An especially strong demand will be made on this country for meats and live stock. In 1917, notwithstanding the many difficulties encountered, the farmers planted the largest acreages in the history of the nation, harvested record crops of most things except wheat, and succeeded in greatly increasing the number of live stock."

"The situation is such that chief emphasis should be given to the production of the great stuple food products, with special stress on wheat and hogs,

the leading war foods." The South is urged to provide food for its own people and feed for its live stock and then to plant as much cotton as can well be cultivated and harvest-To raisers of hogs and beef animals the world need for meats and fats is made clear. Farmers are urged to foln with the men on the ranges in providing sheep whose wool is needed

to comin soldiers. The program discusses the farm labor problem, points out the lines of effort for relief, and outlines the activi-

Spring Wheat In dealing with the question of

The acreage of spring wheat should that we shall have an adequate supply of wheat for our own uses and to meet the needs of the allies.

"While the area of winter wheat sown in 1917 was the inrgest on record, the condition of the crop, as reported on December 1, was the lowest ever recorded, indicating a probable production of only 540,000,000 bushels. Whether the actual production will be greater or less than the estimate will depend upon conditions prevailing between now and the time of harvest. If there were planted to spring wheat in the United States this year an acreage equal to the sum of the record planting in each spring wheat state within the last ten years, there would be sown approximately 23,300,000 acres. If there should be planted an acreage equal to the sum of the record planting for each state within the last five years there would be sown approximately 21,000, 600 acres. The record planting for any year was 20.381,000, in 1911. The acreage for 1917 was 18,511,000.

"The department of agriculture has carefully studied all these records and other data in connection with the present war conditions and needs, and believes that it will be possible this year to secure an acreage in excess of the record acreage which was planted in 1911. It is believed that increased acrenges can be secured in states and sections where spring wheat production is known to be reasonably promising. important passenger terminals will be and that such increases can be made without upsetting farm plans.

It is hoped that many farmers, espe cially in the northern part of the corn belt, will find it possible to plant five to ten acres additional in wheat. In some cases they will plant more.

Period of Rest Coming.

See the studious young man. How lemn he is. His brow overhangs like the back of a snapping turtle, and he an earthquake. He burns the midnight eil in great quantities, poring over ponderous tomes until he is worn almost to skin and bones. But never mind, he will presently have ample opportunity to rest. In a short while he will be admitted to the bar, and after that be will not have anything to do .- Kansas City Stee.

Fashion Approves Fixt-Heel Shoe.

Fiat-heeled shoes have received a style impetus during the winter which is apt to carry them successfully through the coming season—the outing season particularly adapted to the consistent exploitation of footwear of a sports type. While at one time only elderly women could bring themselves to the discarding of the shoe with the French heel, now that fashionable women have elected to wear it only

sible to relieve the strain upon trans-

portation facilities. especially for family needs and for neighborhood, Jack was to play with preserving food for future use, again should be emphasized.

(c) The commercial production of perishables generally should be increased above normal wherever it is reasonably clear that transportation and marketing facilities will be avail- Buddy.

"We've got to get a good actor to play the role of Satan in that spec-

tacular performance." "Then there'll be the devil to pay!" Instinctive Dislike.

"Do you like the clinging vine vadety of people?"

"Not much. They're too apt to be ome kind of suckers."

Left-Handedness

At least one human being in fifty is ised countries.—Adv. eft-handed. This is the minimum ee timate. Some authorities say four in fifty. W. Franklin Jones declares that per cent of the race are born lefthanded, but about three-fourths of these are converted by training into more or less imperfect right-handers. On the other hand, about 1 per cent of the race, though born right-handed, in trained to use the left hand because of accidents to the right.—Scientific
